1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-42 are, drawn to firmware hub / chip set, classified in class 708, subclass 250+.
 - II. Claims 43-47 are, drawn to method having detail of random number feature, classified in class 708, subclass 250+. **It is noted that claims 43-47 are identical to elected original claims 26-30 of parent application S/N No. 09/540,915.**
2. The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because subcombination is not essential to combination. The subcombination has separate utility such as a method having detail of random number feature.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
